

AI for your small business

Cloud and local solutions that fit the way you work

Byte Cloud Consulting LLC

Everyday work is a useful place to begin

Customer replies

Draft answers from your approved policies. Your team reviews before sending.

Business documents

Find information across procedures, FAQs and other materials your team uses.

Routine admin

Turn notes into task lists and prepare drafts for review.

Team support

Help staff use AI tools with clear instructions and a defined review process.

How Byte Cloud can help

AI readiness

Identify useful workflows and review the tools and data you already have.

Implementation

Connect approved business information to an AI workflow on cloud or local systems.

Staff adoption

Build working instructions and train the people who will use the solution.

Improve over time

Review results, maintain the workflow and adjust it as your needs change.

Cloud, local or a combination

Cloud AI

Uses services operated by a cloud provider.

Useful when your team needs shared access.

Review usage costs and the provider's data terms.

Local AI

Runs on hardware your business manages.

Useful when a workflow needs local processing.

Plan for hardware, model updates and maintenance.

Hybrid AI

Combines cloud services with local processing.

Useful when different tasks need different setups.

Define which information can leave your systems.

A first pilot with a clear scope

01 Choose one task

Pick a recurring task and define what a useful result would look like.

02 Prepare the setup

Select the platform and decide which information the pilot can use.

03 Test with the team

Try real examples. Review accuracy, time spent and ease of use.

04 Review the results

Keep, revise or expand the workflow based on the pilot results.

People stay responsible for the work

Approved information

Use business materials your team has permission to share and process.

Defined access

Decide who can use the workflow and which information they can reach.

Human review

Check AI output before it reaches customers or changes business records.

Visible results

Track useful measures, such as corrections needed and time spent on the task.

What we discuss in a first conversation

Your workflow

Which repeated task takes time or creates friction for your team?

Your current tools

Which systems and documents does the task depend on?

Your constraints

What needs to stay local, and who should review the results?

Your next step

What small pilot would help you decide whether AI is useful here?

A conversation about your first AI workflow

Bring one recurring task. We can discuss whether cloud AI, local AI or a combination fits your business.
